

# SCHONSTEDT®

Welcome Dealers,

In 1953 Founder Erick O. Schonstedt made his mark in the aerospace industry designing his first instruments and outfitting more than 400 satellites with magnetometers along with the Hubble telescope. And although the company still offers products still suitable for above the earth, Schonstedt has been focusing on instruments to be used below the earth to aid in locating, tracing, excavating, repairing, maintaining and recovering ferrous metal objects buried up to 20 feet, or 6 meters, underground. Objects include:

- Survey pins
- Markers
- Nails
- Water and gas valves
- Manhole covers
- Unexploded ordnance
- Other deep iron/steel materials

Today, we stand out and apart as manufacturer and distributor of rugged and dependable handheld underground locators. Our products are manufactured in the U.S. and shipped throughout the world. Schonstedt continues to receive numerous favorable and positive testimonials from individuals in the commercial and government sectors worldwide.

I look forward to discussing your interest in Schonstedt products that are unsurpassed not only for its environmental stability but also for its ability to detect iron and steel objects at extreme depth underground.

Sincerely,

Dave Dickey  
Pacific Region Representative
